DIRECTIONS:

Clean surface to be sprayed with Mohawk Wax Wash™ Remover. For best results, can temperature should be 65° - 90°. SHAKE WELL BEFORE USING for at least one minute after ball rattles to ensure color uniformity. Point opening of spray button toward object, holding can 12 to 14 inches away from surface to be coated. Press spray button firmly. Use steady, even strokes. Several thin coats give a better finish than one heavy coat. Allow coating to become tacky between coats. Clean spray button immediately by spraying with can upside down until no more product comes out. If clogged, remove spray button with a twisting motion and clean. Gently twist button onto can with opening turned away from you.

The data on this sheet are calculated values (as formulated) and will not represent exact values for every product. For Safety and Other Precautions, read the SDS before using the product.
